

Electronic Health Information (EHI) Export

File Formats

These are standardized computable formats. The export will include one or more of the below formats depending on set-up and use of the system by the agency.

Single Patient:

- **JSON**

JavaScript Object Notation. JSON is a lightweight format for storing and transporting data. JSON is in plain text, which is readable by a person, but is meant to be parsed and understood by an application or web page. The data includes USCDI v1 data as well as other applicable data.

Patient Population:

- **.bak file**

This is a full SQL Server database backup of all data for an agency that can be restored.
